- a. **Wall:** No tiles behind/below kitchen cabinets, Wall surface above the false ceiling may be left in its original bare condition.
- b. **Marble, Limestone and granite:** Marble, Limestone and granite are natural stone materials containing veins with tonality differences. There will be colour and markings caused by their complex mineral composition and incorporated impurities. While such materials can be pre-selected before installation, this non-

uniformity in the marble, limestone or granite as well as non-uniformity between pieces cannot be totally avoided. Granite is pre-polished before laying and care has been taken for their installation. However, granite, being a much harder material than marble cannot be re-polished after installation. Hence some differences may be felt at joints. The tonality and pattern of marble, limestone or granite selected and installed shall be subject to availability.

- c. External Paints:** External plastered surface of the buildings are painted of suitable quality as decided by the Architects. Paints are manufactured product from chemicals and specific grade of minerals/natural stone product. After application this paint is exposed to weathered conditions. Ultra violet ray and weather conditions will affect life and sheen of the product and also would cause damages to the expected/designed protective properties of paints. Therefore, periodic maintenance including redoing of paints would be inevitable.
- d. Materials, Fittings, Equipment, Finishes, Installation and Appliances:** The brand, colour and model of all materials, fittings, equipment, finishes, installation and appliances supplied shall be provided subject to architect's selection, market availability and the sole discretion of the vendor.
- e. Air Conditioning System:** Provision for fixing of window/split air conditioner in drawing dining area & bedrooms are being provided. For Split A/C assigned spaces are earmarked on the elevation of the building for ease of access and to create uniformity for aesthetic purpose.
- f. Timber:** Timber is a natural material containing grain/vein and tonal differences. Thus, it is not possible to achieve total consistency of colour and grain in its selection and installation. Timber has inherent property to react along with atmospheric changes, which results bending, twisting and cracking if not maintained well consistently.
- g. Internet Access & Cable Television:** If the Purchaser requires internet access & Cable Television, the Purchaser will have to make direct arrangements with the Service Provider and/or such relevant entities/authorities for services to the Unit and to make all necessary payment.
- h. Glass:** Glass, plain/clear/frosted, is widely used in residential developments and may break/shatter due to accidental knocks or other causes. In addition, glass is a manufactured material and the Purchaser may wish to note that it may not be 100% free from impurities. These impurities are not avoidable with quality checks and balances.
- i. Tiles:** Tiles are manufactured from special kind of clay and other materials. Baking on very high temperature is an integral stage of manufacturing process and therefore, shades and flatness of each lot varies a little bit. Hence, Selected tile sizes and tile surface flatness cannot be perfect. Different quality assurance organisations like ISO 10545-2/ Singapore standard SS483:2000 had mentioned acceptable ranges. We, at Ashiana, has been taking utmost care while receiving materials and while install them to minimise these issues but they can never be avoided completely due to inherent properties of the material and therefore excellence in flatness, sizes and minor chips on edges cannot be guaranteed. To minimize such issue tiles are laid with spacers.
- j. Design Experts:** Professionally qualified practicing consultants in the field are deployed to design different functions in compliance to applicable norms and guidelines. These functions are a) Architecture b) Structure c) Plumbing d) Landscape e) Fire Fighting and e) Power & Electrical. Design parameters set by such experts and applicability of their drawings and decisions are treated as final.
- k.** As per structural design principles, structures are allowed to deflect in different allowable loading/atmospheric/ground settlement/seismic parameters. Since masonry and RCC members behaves differently in such situations, therefore hair cracks in different components of the building are inevitable. These cracks are more visible in plastered surface of the masonry work. While conventionally recognized precautionary measures will be undertaken diligently but complete disappearance of such cracks cannot be ascertained.

- l.** Brick work, plaster and application of putty/POP over plastered surface are manual activities. As of date, no machines are found successful to execute these activities without extensive human involvement. Hence, despite all quality process in the job, undulation, out in plumb to certain extent cannot be avoided completely.
- m.** While every reasonable care has been taken in preparing this brochure and in constructing the models and show flats, the Developer and the Marketing Agents cannot be held responsible for any inaccuracies or omissions. Visual representations, models, show flat displays and illustrations, photographs, art renderings and other graphic representations and references are intended to portray only artist's impressions of the development and cannot be regarded as representations of the fact.
